

# WELCOME TO UNIVERSITE GRENOBLE ALPES

Come Study at the Faculty of Pharmacy!

#### UNIVERSITÉ GRENOBLE ALPES AN INTERNATIONALLY ENGAGEDUNIVERSITY

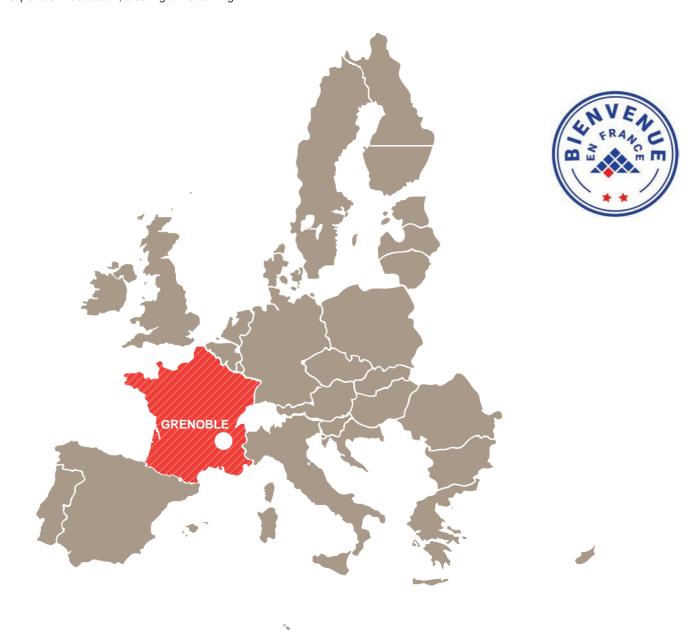

The Université Grenoble Alpes (UGA) is one of France's leaders in higher education and research. As a comprehensive, global university, the UGA was created in order to respond to the challenges of higher education and the world today. Enrolling about 45.000 students each year, the university offers academic programs in all disciplines, and represents a major center for research and innovation in the heart of Europe.

The university and its students, faculties, and staff have close ties to the world around us. We believe these local and global ties make our research, our teaching, and our communities rich and strong, and you will see them reflected in all our key activities. Internationally ranked, the UGA is profoundly committed to its international partnerships, maintaining collaborative projects with more than 650 universities in over 80 countries. Our researchers collaborate with their peers worldwide on innovative projects in every discipline.

International relations also have pride of place in teaching and learning. The UGA's traditions - innovation, diversity, excellence - are embodied in our expertise in education, creating a welcoming

environment for international students, faculty, and staff and fostering the necessary skills in those who wish to broaden their horizons with an international experience.

The UGA's UNESCO Chair in International Communication has spent the last 15 years helping institutions worldwide to build their own master's and doctoral programs. We also participate in prestigious international degree programs, such as our 5 Erasmus Mundus master's programs and more than 50 double-degree programs created with the expertise of our world-wide partners. The UGA is also proud to offer 20 international degree programs taught entirely in English.

#### A TRADITION OF EXCELLENCE IN RESEARCH

Our faculties produce high quality research in all disciplines, and work across disciplinary boundaries to bring innovative solutions to the important problems the world is facing. Researchers in over 80 research centers, supported by national and international funding, work on timely and essential topics such as climate change, cyber-security, big data, and digital technologies in the health sciences.

Taking advantage of its close ties to Grenoble's thriving community of R&D, innovation, and international business, the university has participated in the creation of over forty start-ups, maintains patents for its state-of-the-art research, and actively supports student entrepreneurs. This extraordinarily vital and productive environment is part of the reason that Grenoble has been named 5th most innovative city by Forbes Magazine.

The UGA's Foundation supports interdisciplinary initiatives such as innovative approaches to language learning, health and nutrition in an ageing population, and nanotechnology in satellite construction for space exploration.

## INNOVATION AND INTERDISCIPLINARITY IN TEACHING AND LEARNING

The UGA offers a wide range of degree programs in all disciplines, ranging from undergraduate, master's and doctoral programs to professional degrees and certificate programs. The university maintains close ties to business and industry in order to equip its students for the challenges of the professional world. The UGA has built flexibility into its programs, allowing students to engage in interdisciplinary training, distance learning, or adult and continuing education.

The university is particularly focused on cutting-edge programs in fields such as energy, biotechnology, nanomedicine and nanotechnology. Interdisciplinary programs allow our students to take advantage of the expertise of professors in multiple fields. This same spirit of innovation is present in our approach to pedagogy; the UGA makes the most of digital technology and distance learning to make its programs accessible to students with specific needs, such as handicapped students, student athletes, and working adults.

#### AN UNPARALLELED ENVIRONMENT

Nestled in the heart of the Alps, residents of Grenoble enjoy an unparalleled quality of life. Each year, Grenoble is voted among the top three cities by French students who appreciate the spectacular environment that Grenoble has to offer. Easily accessible by bus, tram, or bike, the UGA's principal location is a 180-hectare self-contained campus, offering extensive student services and a rich student life. Additional locations throughout the Grenoble region place students and faculty close to important European research facilities and innovative international businesses.

The university also offers affordable, dedicated housing for students and international researchers, a variety of cafés and restaurants, and extensive athletic facilities. The UGA offers 35 sports: in addition to mountain sports such as skiing, climbing, hiking, and snowboarding, students, faculty and staff can participate in swimming, rugby, archery, horsebackriding, volleyball, and much more.

Campus life is enlivened by more than 200 student organizations and over 400 cultural events each year. A student-run radio station ties the university to the city of Grenoble, and the UGA's theater - Amphidice - organizes performances, films, lectures, and arts events for the university community. The student center - EVE - provides both a space for social interaction and specific funding for student initiatives.

#### **HEALTH CAMPUS**

#### «AN INTEGRATED ENVIRONMENT TO PREPARE FOR THE FUTURE HEALTHCARE»

The Health Campus welcomes 8000 students every year and prepares them to enter the healthcare sector by delivering a very wide set of diplomas: doctors, pharmacists, biologists, nurses, midwives, physiotherapists, technicians, engineers...

Situated near the main campus of UGA and a few minutes away from the city center of Grenoble, it offers to the students the best environment for studies and for the learning by the practice, thanks to innovative educational approaches and state- of-the-art equipment. This Health Campus groups Faculty of Pharmacy and Medicine, the University hospital of Grenoble (CHUGA), Research laboratories of very high level in the field of the health: Biomedical Engineering for Health (TIMC-IMAG Lab), Institute for Advanced Biosciences (IAB), Grenoble Institute for Neurosciences (GIN), Physio Pathology of Hypoxia (HP2), as well as the business incubator, BIOPOLIS, to welcome start-ups and SMEs in MedTech and BioTech.

The campus offers numerous services to the students with catering services and possibilities of accommodation nearby. Working rooms, computing resources, as well as university library welcome the students for their personal work. A raised park and a botanical garden Dominique Villars (therapeutic and toxic plants) decorates the site and favors serenity for effective studies. More than 2000 m² of rooms of practical class and experimental devices are used by the teachers to dispense interactive and lively courses, widely based on the practice and the simulation.

#### **«A SHARED STRATEGY»**

Over the past years, average life expectancy has increased by approximately 4-5 years per generation. The number of older people in long-term care has grown due to chronic diseases, and the gap between the active and inactive has widened, while the pressure on health and social care costs for society has increased. Awareness of the need to improve lifestyles, urban/natural environment and medical literacy amongst citizens, employers and policymakers has risen and citizen-centered approaches to encourage behavioral change have been initiated. This situation demands that the barriers to innovation be removed. Only if this occurs will industry leaders, entrepreneurs and SMEs be able to effectively turn knowledge and ideas into new products and services that improve the health and quality of life of citizens and drive economic growth. A cross-disciplinary and approach must be taken to address the three main challenges -education and talents, innovation barriers, and enabling technologies and data - that have been identified.

To answer to the new stakes the challenges of Healthcare, the Faculties of Medicine and Pharmacy developed new educational strategies with numerous innovations accessible to the set of the students. The proposed trainings have a large focus on the international, widely calling on to the learning by the practice and the simulation. Numerous teachings are now done by inverted pedagogy and on the basis of multidisciplinary approaches. We are developing the concept of schools, allowing an integrated, intensive, and multidisciplinary education, particularly in the field of the engineering and the new technologies for the health.

#### **KEY FIGURES**

ON THE HEALTH CAMPUS

(Pharmacy, Medecine, Maieutics, Paramedical trainings, Bachelor's degrees, Masters and continuing education).

1600 STUDENTS IN FIRST YEAR OF THE STUDIES OF HEALTH (PACES)

APPROXIMATELY 1100 STUDENTS IN PHARMACY.

.. 176 IN BACHELOR'S DEGREES,

.161 STUDENTS IN M1 AND 197 IN M2

**358** IN MASTER'S DEGREES

### A STRONG ORIENTATIONTOWARDS THE HEALTH APPLICATIONS

#### **«A UNIVERSITY HOSPITAL»**

The UGA works along with the University Hospital Grenoble Alps (CHU Grenoble Alpes), in a close partnership with the Faculties of Medicine and Pharmacy, participating actively in the training of the future medical doctors and pharmacists. It also manages 10 schools and institutes of staff training paramedical which welcome more than 1100 students every year. With more than 2100 beds and places, the CHU is beyond the 12th most important hospitals of France. It employs 8.000 professionals among whom 1.700 are medical doctors and pharmacists. It has successful technical services and provides highly specialized medical care. More than one hundred sorts of specialized teams are contributing directly or indirectly to its vocation of care, education, research and prevention.

#### **RESEARCH**

The CHUGA benefits from a high potential in numerous domains of research on which it bases its scientific fame. It contributes to the progress of the medical and pharmaceutical sciences in contact with all the partners of the research units, faculties, INSERM (National center for scientific Research) and European Synchrotron Facility (ESRF).

#### **CARE**

The CHUGA assures common and highly specialized medical and surgical care and welcomes the whole Emergency patients 24 hours a day. It is organized in 20 poles including additional activities: Clinical units (9); Laboratories and technical units (6); Administrative, logistics and technical (5).

#### **PREVENTION**

The Hospital participates in numerous actions of public health, prevention and educational therapeutic of the patients as well as in the information campaigns of the general public by actions coordinated with the networks of health and within the framework of the Educational Transverse Unit of the Patient (UTEP).

# **LABORATORIES and RESEARCH**

#### ON SOME LABORAT TIO

21 research teams welcome international students. These teams are attached to national research of such as INSERM, CEA and CNRS or work in collaboration with the Grenoble University Hospital Center.

#### **TIMC-IMAG LAB**

(Biomedical Engineering for Health)

#### www-timc.imag.fr

The TIMC-IMAG lab gathers 300 scientists and clinicians distributed in teams, linking computer science and applied mathematics for understanding and controlling normal and pathological processes in biology and medicine. This multi-disciplinary activity both contributes to the basic knowledge of those domains and to the development of systems for computer-assisted diagnosis and therapy. For several years, TIMC-IMAG has been very active in the industrial dissemination of its research results. Some of these actions have resulted in the development of industrial companies in the field of Biomedical Engineering (23 start-ups). This dissemination activity has been rewarded by "Trophée National de l'Innovation" (INPI, French National Agency for Industrial Property). TIMC-IMAG is a joint UGA-CNRS-CHUGA organization (UMR5525), which employs approximately 300 people divided in twelve groups.

#### **IAB**

(Institute for Advanced Biosciences)

iab.univ-grenoble-alpes.fr

The IAB is an institute of international standing in basic and translational biomedical research. The scientific strategy of IAB is based on an unique blend of scientific expertises encompassing the entire biological continuum from molecules to populations and covering genetics, epigenetics and signaling through chromatin, cell biology and cell-matrix interactions, cell signaling, molecular pathology, host-parasite interactions, immunology and environmental epidemiology. IAB is committed to scientific excellence and promotes an intense and dynamic collaborative culture, supporting risk-taking and cross-disciplinary research towards groundbreaking discoveries. IAB is a joint UGA-**INSERM-CHUGA** organization (U1209).

#### **GIN**

(Grenoble Institute for Neurosciences) neurosciences.univ-grenoblealpes.fr

The GIN's mission is to study central and peripheral nervous systems, in order to understand their functioning and propose innovative therapies for neurological, neuromuscular and psychiatric diseases. The GIN's strategy is to develop a research continuum beginning with molecules and ending with humans, based on fundamental high-quality basic research associated with the development of unique and original technological and therapeutic innovations. As a result, there are several ongoing clinical studies that implement concepts or tools developed at the GIN. GIN is a joint UGA-INSERM - CHUGA organization (U U836).

#### HP2

(Physio-Pathology of Hypoxia)

#### hp2.univ-grenoble-alpes.fr

The HP2 laboratory has been created in 2001 with the objective of bringing together around a clinical entity, sleep apnea syndrome (SAS), and an experimental model, Intermittent Hypoxia, a set Competencies and physiological, pharmacological, biochemical and clinical research techniques. A constant interaction between experimental hypotheses and clinical questions is thus implemented, aiming at a better knowledge of the cardiovascular, neurological and metabolic effects of the SAS and optimization of the management of the patients. HP2 is a joint UGA-INSERM-CHUGA organization (U1042).

#### **LBFA**

(Basic and Applied Bioenergetics) www-lbfa.ujf-grenoble.fr

The LBFA develops advanced concepts and applies innovative tools (e.g. imaging, interactomics, etc) in bioenergetics. LBFA is working on molecular bioenergetics, in particular structure and function of key kinases and their role in energy and metabolic homeostasis in cellular systems, animal models or clinical patients, induced by exercise, drugs or chronic disease. LBFA develops specific fields of interestin: (i) mitochondrial physiology and cell death, and (ii) energy metabolism, exercise and nutrition. LBFA is a joint UGA-INSERMorganization (U1055).

## LRB (Bioclinics Radiopharmaceuticals)

The LRB aims to develop radiolabelled molecules for nuclear medicine -diagnosis and therapy- in the fields of cardiology, metabolism, oncology and neurodegenerative diseases. Including both «biological» and «clinical» expertise, LRB can implement all development stages of tracers, from the design of an original molecule to its transfer into the Clinics. Clinical transfer of two molecules developed in the laboratory has been recently successful (glucose transport, and vulnerable atheroma plaque, neurodegenerative). The LRB is a joint UGA-INSERM-CHUGA organization (U1039).

#### IBS (Institute of Structural Biology) www.ibs.fr

The IBS is a research center for integrated structural biology, performing interdisciplinary research at the interface of biology, physics and chemistry. and combines basic science, applied science and technical innovation. IBS's research themes, grouped around 3 research programs: (1) Infection and Molecular Medicine; (2) Membrane Signaling and Transport; (3) Frontiers in Biophysics and Chemistry for Structural Biology, The IBS, which has been funded by the UGA, the CEA, and the CNRS (UMR 5075) employs approximately 270 people divided in eighteen groups.

- "The French Alternative Energies and Atomic Energy Commission (CEA) www.cea.fr

The local innovation ecosystem of Grenoble Alpes region has attracted leading multinationals and has spurred the creation of a growing cohort of start-ups in the field of biomedical technologies. Alongside UGA local organisations, including Medic@lps, Tasda, Minalogic and Lyonbiopôle clusters are active participants in the Medtech/Biotech industry, providing a range of services to support innovation, from training through R&D project engineering and help securing financing. 160 companies are dedicated to medical technologies, biotechnologies and e-health. The turnover of the healthcare sector in Grenoble Alpes exceeds € 4 billion. This sector employs more than 8,500 jobs. Grenoble Alpes have developed partnerships with similar groups abroad, be it BioAlpes (Switzerland) and Bioindustry Park Silvano Fumero on the Alpine pathway or the Montreal Health Technologies Campus and MassMedic (Boston, USA) in North America.

# PHARMACY and BIOTECHNOLOGY

# GRENOBLE, A DYNAMIC INTERNATIONAL SITE FOR STUDYING PHARMACY AND BIOTECHNOLOGY

The Faculty of Pharmacy of Grenoble Alps University (UGA) has a long story of international exchanges for students and professors in order to promote cultures, civilizations and skills sharing and further enrich research, teaching and communities. As an International Institution, we welcome students from different countries around the world to study and follow internships in Grenoble Alps University Hospital, Research laboratories or Companies. Our Faculty promotes innovative education for students in Therapeutics, Diagnostics and Medical devices with a strong emphasis on Biotechnologies. We also organize exchanges for academic members to boost international collaborations in research and teaching.

In 2016, UGA received the IDEX label, an excellence national program to enhance interdisciplinary teaching and research worldwide. As part of the excellence, the Faculty obtained 3 IDEX financing and we are partner of IDEX equipment. Several of our teachers are involved in IDEX Research (CDP). And numerous international students of our faculty benefit from IDEX scholarships.

We propose innovative education in French or English languages (international masters, reversed pedagogy, e-learning, interdisciplinary formation altogether in strong collaboration with Grenoble Alps University Hospital (CHU), Research laboratories or Companies in Pharmacy and biotechnology). In this context, we provide our students and professors a very dynamic and international environment, enabling success for their projects

#### **PHARMACY EDUCATION**

- **n What:** We prepare our students to basic and essential knowledge for pharmacists who pretend to work in hospitals, dispensaries, university laboratories and industries in strong collaboration with the CHUGA.
- **"Who:** Pharmacy students (from 2<sup>nd</sup> year to 5<sup>th</sup> year)
- "Language: French
- n Calendar: Autumn session (End of August beginning of January), 30 ECTS Spring session (Beginning of January beginning of July), 30 ECTS

#### Programs

After a selection of the Pharmacist students at the end of the first year, our pharmacy education proposes for thesecondyearcourseson basicknowledge inbiology, chemistry, physics, statistics and clinical aspects. From the third year, our students are going further with a reversed pedagogy view, e-learning sessions, resolved problem learning and practical sessions on clinical pharmacy, quality control, drugs chemistry commercialization and production, biotechnology, toxicology, experimental pharmacology, regulation and safety. To accompany courses, students apply each year for an internship in hospital, pharmacy, dispensary, companies or research laboratories.

secteur-sante.univgrenoble-alpes.fr/ufrpharmacie

#### **BIOTECHNOLOGY EDUCATION**

- **n What:** We propose a comprehensive range of courses dedicated to Biotechnologies and Health Engineering. Practical sessions are organized using experimental training platforms and Technological Research infrastructures.
- "Who: Bachelor (2<sup>nd</sup> and 3<sup>rd</sup> years) and Master students (1<sup>st</sup> and 2<sup>nd</sup> years)
- "Language: French and/or English
- Calendar: Autumn session (End of August beginning of January), 30 ECTS Spring session (Beginning of January beginning of July), 30 ECTS
